

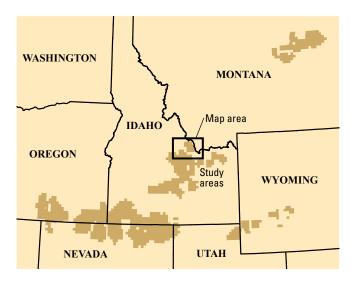

Figure 17. Inset map showing mineral-resource-potential tracts for porphyry-type and porphyry-related type deposits in context of permissive geology and porphyry-deposit occurrences in the northern part of the study area for the North-Central Idaho Sagebrush Focal Area.

EXPLANATION

Assessment tract types – porphyry High-potential (H) tract with high (D) certainty Moderate-potential (M) tract with moderate (C) certainty Permissive geology Occurrences

USGS study area boundary
Proposed withdrawal areas
---- State boundaries

--- County boundaries
